

# GROW PANEL

## INSTRUCTIONS FOR USE

Mellowvision Aquatics Grow Panels are easy to install. Before installing your Grow Panel, you should empty and thoroughly clean your aquarium to remove any water, dust or deposits on the glass.

While we take every precaution to ensure that each Grow Panel is clean and ready for use, the manufacturing process can leave dust and residues on the product that should be removed. Thoroughly rinse and soak the Grow Panel product in room temperature fresh water before inserting it into your aquarium.

For Magnetic Grow Panels, installation is as simple as placing the Grow Panel in the tank, and attaching the provided magnets to the outside of the tank in the upper corners.

When installing a glue-in Grow Panel we recommend the use of an aquarium grade silicone sealant, or polyurethane glue. If using silicone, you should first roughen the glue surface of the Grow Panel with 80 grit sand paper, and thoroughly rinse and dry the surface, to ensure proper adhesion. Be sure to use only enough glue for adhesion, so that excess glue does not squeeze out the sides. It is recommended to leave small gaps around the bottom of the planter area to allow drainage to occur during water changes and gravel vacuuming. As always, any adhesives used should be given adequate time to cure before adding water or sensitive animals.

If you have any questions or concerns about the installation of your Grow Panel insert, please contact us via email at [hello@mellowvision.com](mailto:hello@mellowvision.com).
